Introducing new Ultra-Black ink

Gerber Ultra-Black is a new innovative ink that is cleaner and darker than anything else on the market today. Using this ink, your MP plotter will use up to 40% less ink to create lines that are darker and easier to read.

Ultra-Black ink and cartridges are specially designed for the Gerber MP Plotter. Plus, they're compatible with all Gerber plotters set up to use the HP-45A ink cartridge.

Don't be fooled by cheap cartridges that have been refilled many times with substandard ink. Gerber Ultra-Black ink cartridges have a full 42ml of high quality ink to keep your printer going strong for all of your plotting needs.

Longer Life.

Cartridges are filled to at least 42ml – unlike knock-off cartridges that can't be filled this high and use ink that is prone to clogs and drying out.

Easy to Use.

- **MP Plotters:** Designed specifically to work with the Gerber MP Plotter, no adjustments or software are required

to get the full benefit of this new ink. Your MP Plotter comes from the factory with this ink and will adapt its printing algorithm to maximize the darkness and longevity.

- **Other Plotters using HP-45A ink:** Ultra-Black will out-perform your plotter's current ink. No adjustments or software required to get the benefits of a darker line using this new ink – it just "pops" in and works!

Consistency.

This is the darkest line in the industry. Being this dark allows the line to be easier to read and easier to follow. An easier to follow line enables more productive employees all while using less ink.

Call or click today to see how a difference in simple ink quality can have a positive impact on productivity
